Work experience

Intern software engineer
BOOLFLY VIETNAM COMPANY
3 month

Objective

I am excited to join the company and thrive in its professional environment. Eager to collaborate with colleagues, tackle new challenges, and grow both personally and professionally, I am determined to make a significant contribution to the company's success through my experience and commitment to learning.

My Project

Hotel Management Website
Winter 2022

- Building a website for hotel, customer can order room on the website and receive email to announce the time when customer can come and rent hotel room, using Bootstrap to build user interface. My role is design database, admin section.
- Technical used: HTML, CSS, JavaScript, Python Flask, MySQL.
- Team size: 2

Bubble Tea Shop Management Application
Spring 2023

- Performed team-designed program for users to order and customize boba tea based on size. My responsibility is developing the staff section which can check the order from customer, order a receipt and design customer section.
- Technical used: C#, WPF, SQL Server.
- Team size: 2.

Bus Ticket Sales Application
Summer 2023

- Developing a desktop application by Java, MySQL can make employee order a ticket for customer, administrator can add new bus, view route, edit location. My role in this project is building employee section.
- Technical used: JavaFX, XML, MySQL.
- Team size: 2

Human Resource Application
Autumn 2023

- Programmed Android Application that can use in small business, with friendly interface design using Android Studio and Cloud Firestore as database. My responsibility is developing administrator section, register for employee.
- Technical used: Java, Android Studio, Firebase, Cloudinary.
- Team size: 2

Find Motel Website
Fall 2023 - Now

- Using Spring framework from Java as backend and ReactJS with TailwindCSS can make styling website becomes easier. My responsibility is design database, view statistics for administrator and develop the frontend side. After using React, I explore more and using NextJS framework can save more time and scalable project.
- Technical used: Spring, React, Firebase, TailwindCSS, MySQL., TypeScript, NextJS, Framer Motion, Redux, Axios.
- Team size: 2
